IPR1 – Due Wednesday 25 March by 2359

Requirements:

- Plan of action (who is doing what) and progress to date.
- PowerPoint file showing all progress to date.
- Scans of handwritten planning notes, diaries, sketches and diagrams etc., notes, MSWord notes and outlines, preliminary CHEMCAD designs, etc., should be copied into PowerPoint.
- Follow-up appointments may be required depending on assessment of submission.

Assessment will be based on my impression of your knowledge of the problem and associated tasks and points will be awarded based on the following rubric:

Level (Points)	Description
0	Knowledge of the design problem and associated assignments has not been demonstrated or is essentially nonexistent. Cadets are unprepared and group coordination is difficult to ascertain.
	Cadets have begun to read the assignment but are vague or ambiguous about solution approaches. Work is spotty and group coordination is poor or needs improvement. No evidence of progress toward technical designs.
25	Cadets have read the assignment and articulated clear approach to problems. Work to date appears to be competent.
	Cadets have read the assignment and articulated clear approach to problems. Work to date appears to be competent. Shows evidence of progress toward technical designs.
50	Cadets functioning well as a team. Associated problems have been identified. Detailed plan of attack is presented. Measurable progress toward process designs has been made. TBP plot for crude oil feed is complete and has calculated and experimental curves.
