DEPARTMENT OF CHEMISTRY & LIFE SCIENCE

QUIZ 3 – CH402 2023-2024 10 Minutes, 24 Points 26 February 2025

TEXT: Peters, Timmerhaus, & West SCOPE: Present and future values

References Permitted: FE Reference Manual online.

INSTRUCTIONS

- 1. Do not mark this quiz until "begin work" is given. You will have 10 minutes.
- 2. Solve the problems in the space provided. Show all work to receive credit.
- 3. There are 7 problems on 3 pages in this quiz, not including the cover page.
- 4. Write your name on the top of each sheet.
- 5. Show work to receive partial credit.

(TOTAL WEIGHT: 24 POINTS)

DO NOT WRITE IN THIS SPACE

PROBLEM	VALUE	CUT	
1	3	a	
2	3	C	
3	4	d	
4	4	C	
5	4	d	
6	3	5	
7	3	C	
CUT			
GRADE	24	8	

The data below pertains to Problems 1 and 2 and shows the estimated before-tax annual cash flows for a project.

Year End	1	2	3	4
Cash Flow	\$1,000	\$1,000	\$1,000	\$1,000

1. (6 points) At 6% interest per year compounded annually, the present value of the project is most nearly

- (A) \$3,465
- (B) \$2,165 (C) \$2,700

2. (6 points) At 6% per year compounded annually, the present value of the project at the end of year 4 after 24% annual taxes is most nearly

- A) \$1,740
- B) \$3,040
- (C) \$2,633
- D) \$1,333

Cadet:			
Cauci.			

- 3. (6 points) The present worth of the profits from a process is \$1,606,000. Assuming a facility life of 18 years, what is the equivalent annual cash flow (A) from the process if the interest rate is 2% compounded annually?
 - A) \$125,240
 - B) \$150,300
 - C) \$200,110
 - D) \$107,120

- 4. (6 points) A heat exchanger originally cost \$21,000 and has a service life of three years with no scrap value. Assuming the cost of the original heat exchanger remains the same (no inflation), the capitalized costs of the heat exchanger at 6% annual interest is most nearly
 - A) \$ 87,000
 - B) \$137,000
 - \$131,000
 - D) \$ 59,000

$$CC = CV + P \quad \text{Where } P = \frac{A}{i} \quad P^{237}$$

$$To A given F \Rightarrow (A/F, 67, 3) = .3141$$

$$21,000 + \frac{21,000..3141}{.06} = 5130,935$$

$$-ANS$$

OR

$$21,000 + \frac{21000}{(1+.06)^{3}-1} = $130,938$$

4. (4 points) The annual maintenance costs for a facility are \$0 for the first year and increase by \$300 each year thereafter (assumed payable at the end of each year). Assuming a facility life of 15 years, what is the present worth of the maintenance costs over the lifetime of the facility if the interest rate is 8% compounded annually?

A) \$ 4,510
B) \$22,315
C) \$29,220
D) \$14,370

$$40 P gwien 6" \implies (P/6, 8\%, 10) = 47.8857$$

$$p = 236$$

6. (2 points) The power scaling factor for acetic acid plants using the CH₃OH-CO catalytic process is 0.68. If the fixed capital investment for this type of plant producing 9,000 metric tons per year is \$8,000,000, the price for a plant producing 18,000 metric tons per year is most nearly

A) \$12,120,000
B) \$12,800,000
C) \$16,000,000
D) \$13,700,000

$$\frac{18,000}{9,000}$$

A $\frac{18,000}{9,000}$
 $\frac{18,000}{9,000}$

7. (2 points) The power scaling factor for chlorine plants using electrolysis of NaCl is 0.45. The chemical engineering plant cost index is 394.1 in 2000 and 796.2 in 2025. If the fixed capital investment for this type of plant producing 45,000 metric tons per year was \$33,000,000 in the year 2000, the price for a plant producing 90,000 metric tons per year in 2025 is most nearly

\$33,000,000 ·
$$\left(\frac{90000}{45,000}\right)$$
 · 45 $\left(\frac{796.2}{394.1}\right)$

$$= $91,074,000$$
