## Problem Set 12

## Problem 10.53

The molar volume (cm<sup>3</sup> mol<sup>-1</sup>) of a binary liquid mixture at T and P is given by:

$$V = 120 x_1 + 70 x_2 + (15 x_1 + 8 x_2) x_1 x_2$$

- (a) Find expressions for the partial molar volumes of species 1 and 2 in terms of  $x_1$ .
- (b) Show that the given equation for V is recovered when these expressions are combined using Eq. 10.11.
- (c) Show that these expressions satisfy Eq. 10.14.
- (d) Show that  $(d \overline{V}_1 / dx_1)_{x_1=1} = (d \overline{V}_2 / dx_1)_{x_1=0} = 0$ .
- (e) Make a plot of V,  $\overline{V}_1$ , and  $\overline{V}_2$  versus  $x_1$ .
- (f) Label points  $V_1, V_2, (\overline{V}_1)_{x_1 \to 0}$ , and  $(\overline{V}_2)_{x_2 \to 0}$  on the plot and show their values.

## Problem 10.18

Estimate the fugacity of isobutylene gas at 280 °C and

- (a) 1 bar
- (b) 20 bar, and
- (c) 100 bar.

Use the SRK equation of state.

## Problem 10.21

From the data in the steam tables, determine a good estimate of  $f/f^{\text{sat}}$  for liquid water at 150 °C and 150 bar, where  $f^{\text{sat}}$  is the fugacity of saturated liquid at 150 °C.
