## CH365 CHEMICAL ENGINEERING THERMODYNAMICS

Lesson 22: Statements of the Second Law and Derivation of Entropy

**Read:** Sections 5.1-5.3, pp. 177-185

**Problems:** 5.2, 5.6.

## **Objectives:**

- 1. Read and study the various statements of the second law on pages 173-174.
- 2. Understand the flow of heat and work in the basic heat engine and pump in Figure 5.1
- 3. Perform calculations involving and Carnot efficiency
- 4. Trace the four steps of a Carnot engine or heat pump on a closed cycle in a PV-diagram.

## **Notes:**

The Carnot Cycle Bonus is an important illustration of calculations around the Carnot cycle.
