# INSTRUCTIONS FOR ADDING A LICENSE SERVER TO CHEMCAD

1: Open CHEMCAD. If you already have a stand-alone license, close the blank worksheet that opens on startup, to get the gray screen like I have below. If you don't currently have a license, the license window in step 2 will open first.

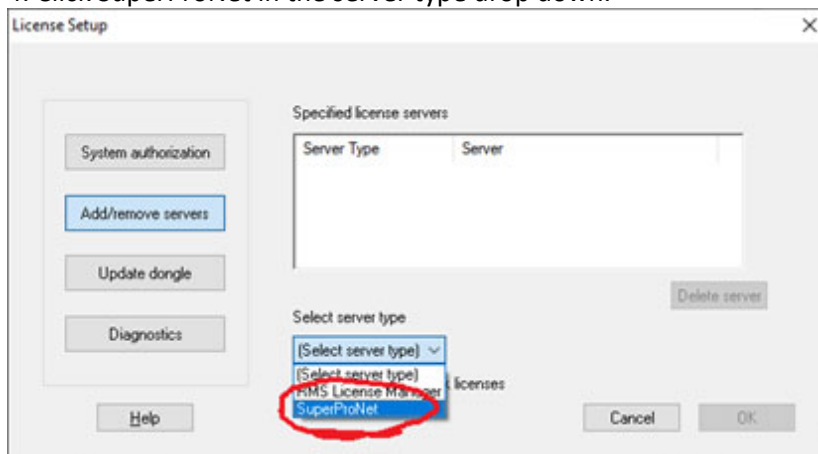

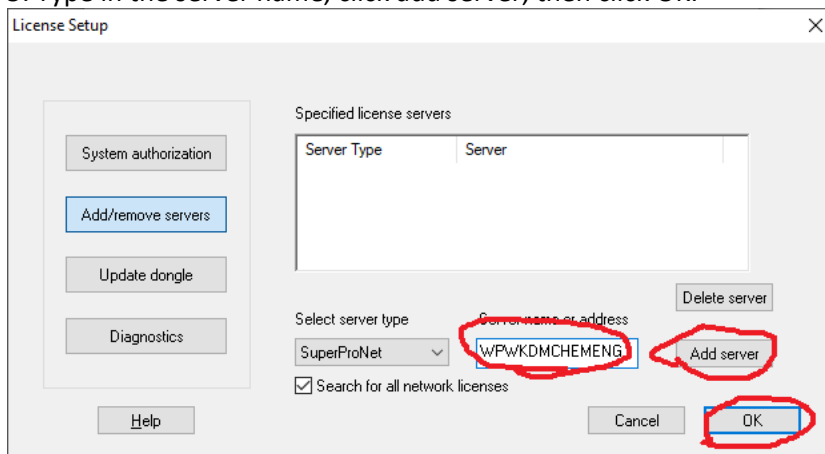

2: Click Setup.

3: Click add/remove servers.

4: Click SuperProNet in the server type drop down.

5: Type in the server name, click add server, then click OK.

6: If successful, the license server will appear below. When the license server is found, click Continue.

If you already have a stand-alone license, you will see two licenses in the window because you have a system license already in. This is not a problem and is perfectly normal.
