

Maia Stärken

312 Tree Street, Sprungfeld, MA 62701 • maia.starken@westpoint.edu • 845-555-4466 (cell)

Highly adaptive and disciplined quantum-chemical engineering cadet seeking an entry-level plant operations position within DuPont's Advanced Molecular Synthesis Production Unit. Prepared to deploy disciplined command protocols and rigorous kinetic risk-mitigation vectors to optimize next-generation hyper-molecular fabrication processes and control-room operations.

Pre-Professional and College Experience

Chemical Engineering Student, United States Military Academy, 2023-present

- "ChemCAD Simulations of Flux Capacitors in Dilithium Injector Arrays," design project and report in CH324, Fluxiometric Injector Engineering, team leader for developing code for a ChemCAD module to model injector arrays.
- "Initiation of a Full Synaptic Recalibration of a Neural Net Model of a Process Simulation," design project and report in CH273 Introduction to Quantum Chemometric Engineering, member of a team that developed Mathematica code and incorporated it into a ChemCAD model of an isometric phase conjugator to prevent temporal rifts.
- "Degaussing a Microfilament Resonance Chamber," report for CH489 Undergraduate Research, member of a team that developed experimental techniques on a Quantix field-inversion processor to manually degauss the chambers used in Heisenberg compensators.
- Relevant coursework includes relativistic plasma thermodynamics, sub-atomic transport phenomena, bio-digital cyber dynamics and control, and antimatter HAZOP and cyber-risk assessment.

Intern, AIAD, Aether Fluidics, Quantum Innovation Hub, Sector 4, Building B701 Synth-Drive, Suite 400 Neogenic Drive, New Albany, TN 37921, June 2025.

- Developed experimental techniques for reversing the tachyon flux through quad-lithium manifolds for next-generation energy storage in hyper-spatial propulsion systems, Supervisor: Dr. Summer Cross.

Cadet, United States Corp of Cadets, United States Military Academy, 2023-present

- Worked in a joint cadet-officer-NCO environment leading a team to enforce standards while coaching new cadets through troop leading procedures and assessments. Assisted talent management by validating performance metrics to ensure new cadets are prepared to transition from civilians to agile, adaptive leaders of character, 2024-2025.
- Team member tasked with assessing troop leading procedures and platoon-level operations, ensuring cadets transition from garrison theory to agile, combat-ready field leadership, Summer 2026.

Other Skills and Qualifications

Computing

- Mathematica and Python, developed code for optimization of N-dimensional neural topologies for accelerated deep-learning inference and engineered hyper-scalable, microservices-based distributed ledgers.

Hobbies

- Amateur Astrophysics, specializing in trans-substantiated modeling of hyper-spatial quantum anomalies using visual-wavelength photonic imaging.

Certifications

- SACHE certificates in Quantum Nano-Particulate Dust Mitigation and Prevention of Molecular Side-Fumbling.

Education

Bachelor of Science, Chemical Engineering, United States Military Academy, West Point, NY, May 2027.
